

EL NIÑO 2026

Impacts for Africa

El Niño alters atmospheric circulation and influences rainfall patterns in many parts of Africa.

EXPECTED IMPACTS

- Drier than normal / Drought risk
- Wetter than normal / Flood risk
- Mixed conditions / High variability
- Hotter than normal / Water stress

Impacts vary within countries. Local forecasts and early warnings are essential.

Monitor forecasts

Strengthen community preparedness

Manage water wisely

Protect seeds, soils and biodiversity

Solidarity and collective action

Agroecology increases resilience to climate extremes and protects food sovereignty.
